

Personalized wellbeing for 1 billion people  
with **Neuroadaptive AI**

Improving the global state of wellbeing by adding an **emotional intelligence layer** to software and devices

# Why should you care about integrating emotional intelligence into your software and products?

Products and content that adapt to user moods are much more engaging and effective

Leading to happier users  
as a side effect

Nothing currently allows this at scale,  
cheaply and reliably

# That's where we come in.

**Mood-as-a-Service software platform**  
brings emotional intelligence technology to our  
**B2B customers**
